AutoCardio4D

The standard for
myocardial scintigraphy

**In two seconds from
raw data to reproducible
examination result!**

AutoCardio4D

AutoCardio4D

- Fully automatic reproducible heart evaluation for gated and ungated examination results
- High resolution 3D reconstruction
- Fully automatic identification of the heart structure and heart-axis aligned reorientation
- Automatically centred 2x zoom of the myocardium
- Extensive gender-specific standard collectives with approx. 1100 MIBI patient studies for prone and supine position, as well as 400 gender-specific thallium studies
- Fully automatic presentation of all diagnostically relevant heart parameters with validated EF calculation using the 'MRI gold standard'
- Calculation of SSS and SRS summed scores, as well as calculation of defect size
- Extensive Cine Tools for 3D depiction of the beating heart
- Polar maps and freely configurable documentation

We would be pleased to send you detailed information on request.
